The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:Inhibitor complexes. This sequence contains the alpha-helix0 wild-type sequence. Modified hepatitis C virus (HCV) NS3 protease comprising at least 1 substitution of a hydrophobic alpha-helix 0 amino acid to a hydrophilic amino acid, useful for screening inhibitors that may treat hepatitis C Example 5; Fig 18; 66pp; English. 197 AA; Sequence

The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NG3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:inhibitor complexes. This sequence contains the alpha-helix0-liveriant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LVTRHADVIPVRRRGDSRGSLLSPRPISYLKGSSGGPLLCPAGHAVGIFRAAVCTRGVAK 178
                                                      Modified hepatitis C virus (HCV) NS3 protease comprising at least 1 substitution of a hydrophobic alpha-helix 0 amino acid to a hydrophilic amino acid, useful for screening inhibitors that may treat hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MKKKGSVVIVGRINLSGDIAYAQQTRGEEGCQETSQIGRDKNQVEGEVQIVSTAIQIFLA

```
The present sequence is a mutated version of a fusion protein created using the Hepatitls C virus (HeV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of the two proteins should be effective as chronic liver disease such as cirthosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and proteins the alpha-helixor?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TCINGVCWTVYHGAGTRTIASPKGPV1QMYTNVDKDLVGWPAPQGSRSLTPCTCGSSDLY 118

The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NG3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as NCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease: inhibitor complexes. This sequence contains the alpha-helix0-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               59 TCINGVCWTVYHGAGTRTIASPKGPVIQMYTNVDKDLVGWPAPQGSRSLTPCTCGSSDLY 118

                                                                                                                                                                                                                                                                                                                                 This sequence represents the entire hepatitis C virus polyprotein. HCV is a member of the flavivirus family and appears to encode a basic polypeptide domain ("C") at the N-terminal of the viral polyprotein, followed by two glycoprotein domains ("EI", "EZ/NSI"), upstream of the nonstructural genes NS2 through NS5. See also AAQ39134-48, AAR33982-4008 and AR38088-89.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                   The present protein sequence is the fusion polypeptide, comprising the hepatitis C virus NS4A poptide-1 fragment, covalently attached to the amino terminus of NS3 catalytic domain. This fusion polypeptide to the NS3 domain expressed in a stable, soluble form. This facilitates the use of the polypeptide in direct screening of potential anti-viral compounds, that are used for diagnosis and treatment of hepatitis C virus infection. It is also used to screen for inhibitors of serine protease activity. The polynucleotides are also useful to identify diagnostic or therapeutic compounds and for recombinant production of the fusion

                                                                                                                                            RNA was isolated from the plasma of a HCV scropositive human (designated "LG") and cDNA was prepared from it. The cDNA was PCR amplified using specific primers with sequences based on the prototype HCV-1 cDNA sequence (GENBANK M62321). Further amplification using nested primers resulted in 7 adjacent HCV DNA fragments which could be assembled into a full-length sequence. The DNA sequence was determined and translated into the genomic amino acid sequence. Comparison of the LG genomic amino acid sequence with that from HCV-1 showed 134 amino acid differences. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                   87.7%: Score 895.5; DB 14; Length 3011; 85.8%; Pred. ```

```
It is the sequence encoded in the open reading frame of hepatitis C virus cDNA inserts in clones 141,m 11b, 7f, 7e, 8h, 33c, 40b, 37b, 35, 36, 81, 32, 33b, 25c, 14c, 8f, a33f, 33g and 39c. It is antigenic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, non-B hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        348

                                                                                                                                                                                                                                   The sequence is encoded by the composite cDNA of AAN90327. These antigens react with antibodies in patients with non-A non-B heptilis (NANBH). They can be used to diagnose HVV-induced NANBH, to raise antibodies for immunoassay or treatment, or to produce vaccines. (Updated on 25-MAR-2003 to correct PR field.)

```
It is the sequence encoded in the open reading frame of hepatitis C virus (HCV) cDNM inserts in clones 12f through 15e. It is antiqenic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, non-B hepatitis.

SUBDNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY $29.

T *Complex of NS3 protease and NS4A peptide of BK strain hepatitis C virus: a 2.2-A resolution structure in a hexagonal crystal form.";
Protein Sci. 7:837-847(1998).

C *Protein Sci. 7:837-847(1998).

C *Protein Sci. 7:837-847(1998).

C *Protein Sci. 7:837-847(1998).

C *PROTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PROLE IN THE VIRAL RNA REPLICATION.

C *PROTICT ACTIVITY: Hydrolysis of four peptide bonds in the viral presuresor polyprotein, commonly with Asp or Glu in the P6 precursor polyprotein.

C *PRALYTIC ACTIVITY: N nucleoside triphosphate ~ N diphosphate +

Molecular cloning of hepatitis C virus genome from a single Japanese carier: sequence variation within the same individual and among infected individuals.";
Virus Res. 23:39-53(1992).
L. PUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE
I. FUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4B AND NSS AND NSS MAY PROLES HOUSE IN THE VIRAL RNA REPLICATION.
NSS AND NSS MAY HYDROLYSIS of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6
precursor polyprotein, commonly with Asp or Glu in the P6
position, Cys or Thi in Pl and Ser or Ala in Pl'.
C. CATALYTIC ACTIVITY: N nucleoside triphosphate * N diphosphate +
Genome polyprotein [Contains: Capsid protein C (Core protein) (P22); Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (GR01) (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -1. SUBGNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E, THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        InterPro: IPR001410; DEAD.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Core protein; Coat protein; Envelope protein; Helicase; ATP-binding;
Transmembrane; Nonstructural protein; Hydrolase; Serine protease.
INIT_MET 1 1 REMOVED FROM CAPSID PROTEIN C BY THE CELLULAR AMINOPEPTIDASE.
CHAIN 116 191 MATRIX PROTEIN (POTENTIAL).
CHAIN 192 383 MAJOR ENVELOPE PROTEIN E (POTENTIAL).
CHAIN 384 733 NONSTRUCTURAL PROTEIN NSI (POTENTIAL).
CHAIN 734 1010 NONSTRUCTURAL PROTEIN NSI (POTENTIAL).
                                                                                                                                                                                                                                                                 VITOLOGY 188:331-341(1992).

-1- FUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Gys or Thr in P1 and Ser or Ala in P1'.

-1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polyprotein; Glycoprotein; Transferase; RNA-directed RNA polymerase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF

Neumann G.M., Bach L.A.;

The N-terminal disulfde linkages of human insulin-like growth a The N-terminal disulfde linkages of human insulin-like growth factor-binding protein-6 (hIGFBP-6) and hIGFBP-1 are different as a determined by mass spectrometry.;

T determined by mass spectrometry.;

T Biol. Chem. 274:14587-14594 (1999).

-!- FUNCTION: IGF-binding proteins prolong the half-life of the IGFs and have been shown to either inhibit or stimulate the growth promoting effects of the IGFs on cell culture. They alter the interaction of IGFs with their cell surface receptors.

-!- PIM: Phosphorylated; probably by casein kinase II. Alters the affinity of the protein for IGFs.

-!- FIM: Phosphorylated; probably by casein kinase II. Alters the affinity of the protein for IGFs.

-!- SIMILARITY: Contains 1 IGFBP domain.

-!- SIMILARITY: Contains 1 IGFBP domain.

-!- SIMILARITY: Contains 1 IHyroglobulin type-1 domain.

-!- CAUTION: Ref.2 sequence differs from that shown due to frameshifts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.
